SARTHAK PAINULI

Software Engineer

+91 9318461676 | sarthak.painuli3101@gmail.com | linkedin.com/in/sarthak-painuli | Bengaluru, Karnataka

SUMMARY

Software Engineer with experience developing scalable web applications and payment infrastructure using Java, React, Python, SQL, and cloud technologies. Skilled in backend development, REST APIs, payment gateway integrations, database design, and building reliable production systems. Passionate about writing clean, maintainable code and delivering high-quality software that creates measurable business impact.

SKILLS

Backend: Java, Python, Node.js, Spring Boot, FastAPI, SQL, PostgreSQL, Redis, Haskell, REST APIs, JWT Authentication

Frontend: React, Next.js, TypeScript, JavaScript, HTML5, CSS, Vite, Presto, PureScript

AI: Generative AI, OpenAI API, Gemini API, LLMs, LLM Token Optimization

DevTools/Others: Git, Linux, Docker, Docker Compose, Nginx, Postman, OpenAPI, AWS, Data Structures, OOP

EXPERIENCE

Product Engineer — Juspay

08/2025 - 06/2026 | Bangalore, India

- Built a multi-method checkout page supporting dynamic payment options, increasing payment processing throughput by 70% through full-stack integration of frontend components with backend services.
- Improved UI rendering performance by 15% by optimizing Presto-based modules, enhancing load speed and user experience across the payment flow.
- Designed and integrated 6+ end-to-end transaction flows (initiation, 3DS auth, refund, capture, webhook ingestion) across 3+ payment providers, connecting frontend states to backend processing logic.

Web Development Intern — NXP Semiconductors

07/2024 - 06/2025 | Noida, India

- Developed 8+ internal full-stack web applications (Java, JSP, SQL, HTML5/CSS/JS) to streamline employee workflows and operations.
- Built a lab inventory and booking management system handling 100K+ tools, combining a responsive frontend UI with backend query logic for real-time resource tracking.
- Increased adoption of an internal developer tooling platform by 40% by improving frontend workflows for embedded systems validation and diagnostics.

PROJECTS

MockEngine | React, TypeScript, Node.js, Express, Docker — Link

Self-hosted API mocking platform for simulating realistic backend behavior without writing server code.

- Developed a self-hosted API mocking platform with 14+ production-style capabilities, reducing frontend dependency on backend availability during development.
- Implemented a configurable routing engine evaluating 4 request attributes to deliver dynamic, production-like API responses from a single endpoint.
- Implemented OpenAPI 3.x import, auto-generating routes and example responses from spec files in a single upload step.
- Built a Dockerized multi-environment architecture supporting isolated mock servers, persistent storage, and request logging for concurrent API testing.

Voyage | Next.js, TypeScript, Java, Spring Boot, Python, FastAPI, PostgreSQL, Redis, Docker — Link

Full-stack AI travel planning platform with collaborative itineraries, live budgeting, route optimization, and an AI travel assistant across a 3-service microservice architecture.

- Architected a 3-service microservice system (Next.js, Spring Boot, FastAPI) behind an Nginx reverse proxy, deployed via Docker Compose across 5 containers.
- Integrated 2 LLM providers (OpenAI, Gemini) across 5 AI endpoints with automatic fallback to mock responses on API failure.
- Achieved automated test coverage with JUnit/Mockito (Java) and pytest (Python), wired into a GitHub Actions CI pipeline running on every push/PR.

EDUCATION

B.Tech in Computer Science Engineering *11/2021 - 06/2025*

Jaypee Institute of Information Technology

ACHIEVEMENTS

- Achieved a 3-star rating on CodeChef (1717 max rating)
- Solved 150+ problems on LeetCode
- Earned 5 HackerRank certifications — 5★ C++, 3★ Python, 3★ Problem Solving, 3★ Data Structures, 3★ Java
